

About Me

Senior Computer Science student at Chapman University with an interest in Physics. I am curious, dedicated to learning, and enjoy problem-solving. Experience with **Machine Learning** and **Software Engineering**. Researching fairness in AI Systems. Advanced in **C++**, **Python**, and **Java**.

Education

Chapman University Aug 2022 – May 2027
MS in Electrical Engineering and Computer Science

- **Coursework:** Data Structures and Algorithms, Scientific Computing, Computer Networks & Security, Software Requirements and Testing, Software Design, Database Management, Programming Languages

Experience

Software Engineer Intern Irvine, CA
Ingram Micro June 2025 – August 2025

- Contributed in an **Agile** Software Development Lifecycle utilizing **JUnit** to follow Test Driven Development.
- Redesigned xVantage discounts to allow for Order-Based Discounts for vendors. Reconfigured **open-API** schemas to allow for a new data flow between the service and engine layers.
- Optimized **SQL** queries to follow production requirements. Refactored legacy code to remove unnecessary logic, updated deprecated **Java** items.
- Developed AI Agents in **Python** using Google ADK to audit and automate NodeJS dependency updates, and to answer internal questions, using **RAG** for information retrieval. Collaborated with multiple teams in different areas of the company, including non-technical associates, to understand user requirements

Research Assistant Orange, CA
Chapman University August 2024 – Present

- Currently creating a multi-modality model to predict Length of Stay for hospital patients. Fusing time-series EHR data with text-based notes and X-ray images using **PyTorch**. Using a Lagrangian Constraint-based In-Processing method and an Adversarial Learning model to decrease bias in demographic groups.
- FIRE and Robert A. Day Excellence Grant Recipient [[Winning Proposal](#)]
- **Publication:** [Inpatient Length of Stay and Mortality Prediction Utilizing Clinical Time Series Data](#)

Projects

AI Handwashing Analyzer [\[GitHub\]](#)

- Developed a hand-washing habit recognition tool with [LayerJot](#) using **Python**, **Tensorflow**, and **OpenCV**. I spearheaded a 6-person team. I then revised the model for 20% better accuracy in a solo project.
- Overall Winner of GCI Showcase, competing against 53 other teams. Grand Prize Winner. [[Article](#)]

Canvas Notes Agent [\[GitHub\]](#) [\[Submission\]](#)

- Developed an AI Agent with a Chrome extension front-end to generate notes and study guides for students on their Canvas-Instructor classes. Uses **Gemini** and **LangChain**. Created for IEEE AI Dev Hack 2025.

Skills

Languages: Java, C++, C, SQL, Python, JavaScript, HTML, CSS, Bash, Swift

Technologies: Maven, OpenCV, AWS, Pandas, Scikit-learn, PostgreSQL, CI/CD, Spring Boot, Rest APIs, PyTorch, AngularJS, LLMs, Docker, Git, NLP, AWS, NodeJS

Leadership

Camp Kesem: Volunteer camp counselor for local children affected by a parents cancer.

Chapman CARES: I help organize and set up events on campus that create awareness for violence on campus, and provide support for those affected. Helped train University Resident Advisors on best practices.
